What You Should Know About Your Endocannabinoid System

by Dan Reich

Everyone (and every vertebrate, including most pets) has an Endocannabinoid System, or ECS. This system works much like the immune system to facilitate the body's desire to stay in homeostasis, which means keeping things the way they are. If something becomes inflamed, the ECS tries to stem the inflammation and return the body to a non-inflamed state.

What makes this happen are chemical compounds known as endocannabinoids, which occur both naturally in the body and in the cannabis plant. The two best known are THC and CBD. Both provide documented health benefits, but the psychoactive properties of THC have caused it to be both embraced and demonized in modern America, despite 5000 years of medicinal use in other cultures. CBD, on the other hand, has become a growing phenomenon, equal parts miracle stories and hype.

Ready For Its Close-Up

Leonard Leinow is interviewed in the newly released documentary, CBD Nation

CBD has emerged as a star player in the endocannabinoid system, and a new film that premiered August 25, **CBD Nation**, showcases its role in providing dramatic health benefits through inspiring stories and insights from cannabis thought leaders. Among those profiled is our own Leonard Leinow. One of the first to recognize the health benefits of CBD at a time when everyone else was focused on THC, Leinow feels this film could usher in a critical mass of awareness of the benefits of CBD and its role in the endocannabinoid system.

The film has been written up by Forbes magazine, among others, and seems destined to expand the conversation about CBD with research and facts rather than hype.

To purchase or rent **CBD Nation**, it is now available on Apple iTunes. <https://itunes.apple.com/us/movie/cbd-nation/id1524736146?ls=1>

The more people learn about their Endocannabinoid System and how CBD can provide health benefits to literally everyone, as well as their pets (See CBD and Pets below) the more healthy creatures we'll have among us.

The Endocannabinoid System (Part One)

By Michael Moskowitz, MD

The endocannabinoid system is critical to the existence of all living animals. It is present throughout species and is largely used to stabilize critical underlying systems, such as the immune system (inflammation, anti-inflammation, protection), the endorphin system (pain and pleasure continuum), the catecholamine/serotonin system (mood, anxiety, energy and rewards), the GABA/Glutamate system (stimulation and soothing), the Hypothalamic/Pituitary/Adrenal axis (hormones), the PPAR system (anti-microbial, neuroprotection, neuroregeneration) and the TRP system (neuroprotection, bone health, temperature perception).

This incomplete list gives a good overview of how important this system is, despite only being understood since 1996. It has a simple core of 2 pure receptors of CB-1 and CB-2 (Cannabinoid-1 and Cannabinoid-2), 2 neurotransmitters and immune signaling agents (AEA and 2-AG) and five enzymes, including three that synthesize AEA and 2-AG (NAPE and DAGL- α and DAGL- δ and two that break them down (FAAH and MAGL). Beyond these basic substances there are many other substances in the body that enhance these substances and are considered part of the extended endocannabinoid system.

Can CBD Oil Improve My Pet's Health?

By Dan Reich

If you've been wondering whether the many health benefits of CBD, such as reducing pain, inflammation, anxiety and seizures could benefit your pet, read on...there is really no reason not to offer your pets relief from a variety of conditions such as arthritis, separation anxiety and many more. It's important to understand a few things about CBD and CBD products, but armed with the right information, you and your pet can proceed confidently into an enhanced life courtesy of CBD.

The most important thing to keep in mind is that CBD Oil is a relatively new product, and as such is not regulated very well. However, the benefits of CBD are so undeniable that there has been a sort of "gold rush" into CBD products on the part of operators out to make a quick buck. These may contain little or no CBD, but worse, may contain chemicals or pesticides, which can be harmful. *Make sure THC content is low. Animals are far..*
